Estero Bay Aquatic Preserve
SEACAR Habitat Analyses

Last compiled on 05 October, 2023

Contents

Threshold Filtering

Threshold filters, following Florida Department of Environmental Protection Division of Environmental Assessment and Restoration (DEAR) are used to exclude specific results values from the SEACAR Analysis. Based on the threshold filters, QAQC Flags are inserted into the SEACAR_QAQCFlagCode and SEACAR_QAQC_Description columns of the export data. The Include_YN column indicates whether the QAQC Flag will also indicate that data are excluded from analysis. No data are excluded from the data export, but the analysis scripts can use the Include_YN column to exclude data.

Table 1: QA Flags inserted based on threshold checks

SEACAR QAQC Description	Include YN	SEACAR QAQCFlagCode
Exceeds Maximum threshold. Not verified in raw data	N	2Q
Exceeds Maximum threshold. Verified in raw data	N	3Q
Below Minimum threshold. Not verified in raw data	N	4Q
Below Minimum threshold. Verified in raw data	N	5Q
Within threshold tolerance	Y	6Q
No defined thresholds for this parameter	Y	7Q

Value Qualifiers

Value qualifier codes included within the data are used to exclude certain results from the analysis. The data are retained in the data export files, but the analysis uses the "Include" column to filter the results.

STORET and WIN value qualifier codes

Value qualifier codes from STORET and WIN data are examined with the database and used to populate the Include_YN column in data exports.

Table 2: Value Qualifier codes excluded from analysis

Value Qualifier	Include YN/10	MDL YN/10	Qualifier Source
H	0	0	STORET-WIN
J	0	0	STORET-WIN
V	0	0	STORET-WIN
Y	0	0	STORET-WIN

Systemwide Monitoring Program (SWMP) value qualifier codes

Value qualifier codes from the SWMP continuous program are examined with the database and used to populate the Include_YN column in data exports. SWMP Qualifier Codes are indicated by Qualifier-Source=SWMP.

Table 3: SWMP Value Qualifier codes

Qualifier Source	ValueQualifier	Include YN
SWMP	-1	1
SWMP	-2	0
SWMP	-3	0
SWMP	-4	0
SWMP	-5	0

Qualifier Source	ValueQualifier	Include YN
SWMP	0	1
SWMP	1	0
SWMP	2	1
SWMP	3	1
SWMP	4	1
SWMP	5	1

Water Quality - Discrete

The following files were used in the discrete analysis:

- *Combined_WQ_WC_NUT_Chlorophyll_a_corrected_for_pheophytin-2023-Jul-14.txt*

- *Combined_WQ_WC_NUT_Chlorophyll_a_uncorrected_for_pheophytin-2023-Jul-14.txt*

Value Qualifiers

I - The reported value is greater than or equal to the laboratory method detection limit but less than the laboratory practical quantitation limit.

Q - Sample held beyond the accepted holding time. This code shall be used if the value is derived from a sample that was prepared or analyzed after the approved holding time restrictions for sample preparation or analysis.

U - Indicates that the compound was analyzed for but not detected. This symbol shall be used to indicate that the specified component was not detected. The value associated with the qualifier shall be the laboratory method detection limit. Unless requested by the client, less than the method detection limit values shall not be reported

Programs containing Value Qualified data:

5002 - Florida STORET / WIN
476 - Charlotte Harbor Estuaries Volunteer Water Quality Monitoring Network

Value Qualifiers

S - Secchi disk visible to bottom of waterbody. The value reported is the depth of the waterbody at the location of the Secchi disk measurement.

Total Nitrogen

Total Nitrogen Calculation:

The logic for calculated Total Nitrogen was provided by Kevin O'Donnell and colleagues at FDEP (with the help of Jay Silvanima, Watershed Monitoring Section). The following logic is used, in this order, based on the availability of specific nitrogen components.

1) TN = TKN + NO3O2;
2) TN = TKN + NO3 + NO2;
3) TN = ORGN + NH4 + NO3O2;
4) TN = ORGN + NH4 + NO2 + NO3;
5) TN = TKN + NO3;
6) TN = ORGN + NH4 + NO3;

Additional Information:

- Rules for use of sample fraction:
    - FDEP report that if both "Total" and "Dissolved" are reported, only "Total" is used. If the total is not reported, they do use dissolved as a best available replacement.
    - An analysis of all SEACAR data shows that 90% of all possible TN calculations can be done using nitrogen components with the same sample fraction, rather than use nitrogen components with mixed total/dissolved sample fractions. In other words, TN can be calculated when TKN and NO3O2 are both total sample fraction, or when both are dissolved sample fraction. This is important, because then the calculated TN value is not based on components with mixed sample fractions.

- Values inserted into data:
    - ParameterName = "Total Nitrogen"
    - SEACAR_QAQCFlagCode = "1Q"
    - SEACAR_QAQC_Description = "SEACAR Calculated"

Programs containing Value Qualified data:

5002 - Florida STORET / WIN
303 - River, Estuary and Coastal Observing Network

Value Qualifiers

I - The reported value is greater than or equal to the laboratory method detection limit but less than the laboratory practical quantitation limit.

Q - Sample held beyond the accepted holding time. This code shall be used if the value is derived from a sample that was prepared or analyzed after the approved holding time restrictions for sample preparation or analysis.

U - Indicates that the compound was analyzed for but not detected. This symbol shall be used to indicate that the specified component was not detected. The value associated with the qualifier shall be the laboratory method detection limit. Unless requested by the client, less than the method detection limit values shall not be reported

Total Phosphorus
